SUBJECT Mini-CD ROM to substitute insert sheets in quantex line

With the aim of improving our **quantex line kits** and being more competitive and modern, we are happy to announce that we are ready to implement a Mini-CD ROM to substitute the classic paper inserts of our quantex line kits.

This substitution will enable us to include more information and to implement more languages in the future.

The CD ROM has the following external appearance:

Note: Graphic shows its real size, 61x 80 mm.

The CD ROM includes an auto-exe file which, once inserted in the CD ROM reader from your computer, can be read automatically.

On the first screen, the user can choose the language from a menu of seven: English, Spanish (Español), German (Deutsch), French (Français), Italian (Italiano), Portuguese (Português) and Greek (Ελληνικά).

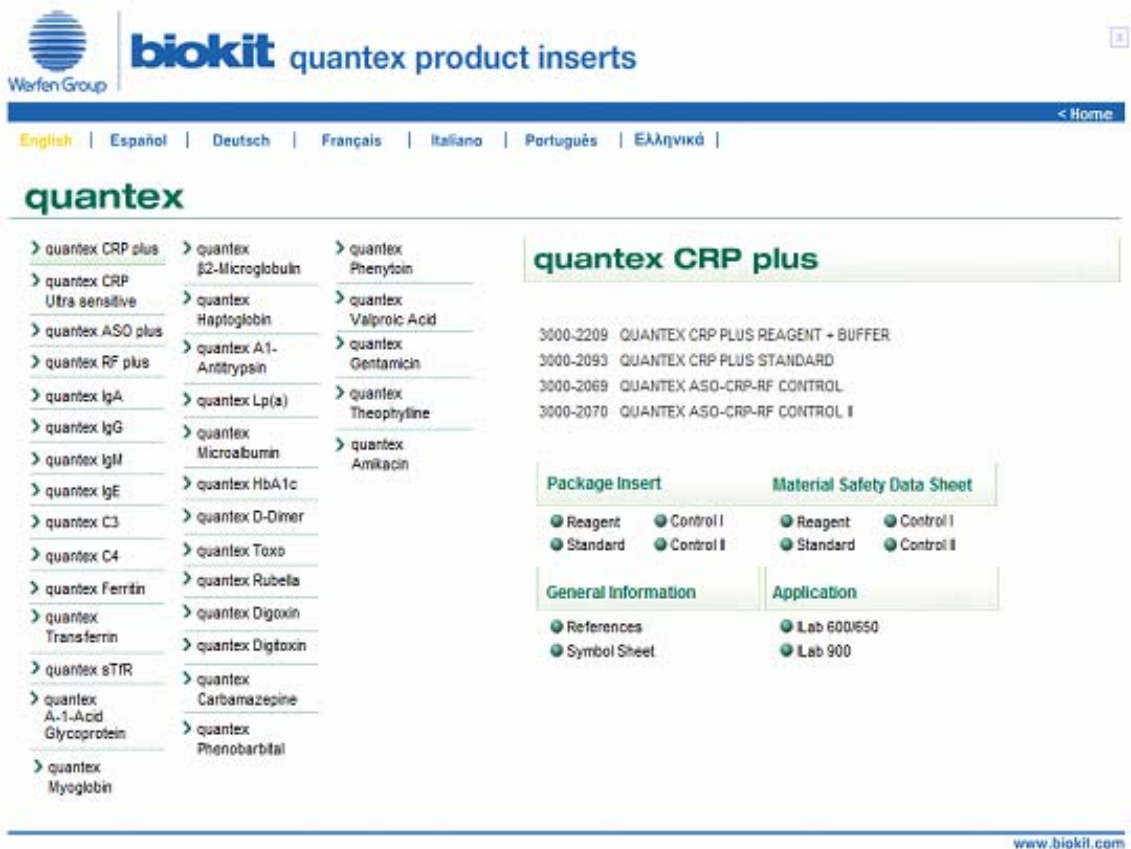

Once the language is selected the quantex reagent menu will appear.

Information on the reagent you are looking for can be selected from this screen.

Next, the appropriate submenu will appear on the right of the screen and the reagent, standards or control/s insert can be selected.

MDSS, bibliographical references, the IVD symbol sheet and application settings for ILab 900 and ILab 600/650 instruments are also included.

quantex
